

Good morning. I have been a subscriber to XM Satellite Radio for over a year now. Just recently, I added a second receiver to my car. My friends listen to satellite radio, my relatives listen and I'm proud to say that it's been my pleasure to introduce them to it.

Suffice it to say, it is offering all of us a wonderful alternative to today's lackluster programming available on FM and AM.

The new additions to programming, whereby you can now receive weather and traffic in many cities, including right here in Washington DC, as well as 100% commercial free service has just been outstanding.

I respectfully urge you to reject NAB's petition 04-160 and to continue to support satellite radio's ability to provide the country with a sound alternative to traditional radio programming.

Sincerely,

Joseph E. Young
